Design Specification

Overview:

Planning and development management system is one of the vital part of management control system (MCS). Both Back-end and Front-end server manages the implementation of planning and development design of a software system. Client and server side management system make sure the whole things more user friendly.

The Back-end part:

- 1. Node.js
- 2. Database → Oracle
- 3. MS Server Version 2.0

The Front-end part:

- 1. React.js
- 2. Bootstrap
- 3. Domain → Friendly

Abstract

Development planning happens in many different contexts so to define it succinctly is tricky. Basically development planning refers to the strategic measurable goals that a person, organization or community plans to meet within a certain amount of time. Usually the development plan includes time-based benchmarks. It generally also includes the criteria that will be used to evaluate whether or not the goals were actually met. To fulfill requirement our aim is to design such software that performs development & planning.

Chapter-1: Introduction

In this chapter we will focus on the status of the current management system and some of the goals for the progress of this system. That is why we will continue to move towards the future by overviewing some current systems. In the following sections, these terms have been discussed in details.

1.1 Review of the Planning and development management System

Planning can be defined as "thinking in advance what is to be done, when it is to be done, how it is to be done and by whom it should be done". In simple words we can say, planning bridges the gap between where we are standing today and where we want to reach.

Planning involves setting objectives and deciding in advance the appropriate course of action to achieve these objectives so we can also define planning as setting up of objectives and targets and formulating an action plan to achieve them.

Another important ingredient of planning is time. Plans are always developed for a fixed time period as no business can go on planning endlessly.

1.2 Motivation

Development is a process that creates growth, progress, positive change or the addition of physical, economic, environmental, social and demographic components. The purpose of development is a rise in the level and quality of life of the population, and the creation or expansion of local regional income and employment opportunities, without damaging the resources of the environment. Development is visible and useful, not necessarily immediately, and includes an aspect of quality change and the creation of conditions for a continuation of that change.

1.3 Aims and Objective

Our aims is to achieve a good transport system that has ability to fulfill our requirements.

- ✓ Platform Independent
- ✓ Auto Synchronizing
- ✓ Friendly Environment
- ✓ Domain and Hosting
- ✓ Generate Each section Report
- ✓ Multi-functionality
- ✓ Feasibility study, construction data, O & M data management
- ✓ PPP cell generate & FCP control

1.4 Solution Methodology

- > Design Settings with Feasibility, Construction & Project management
- Design upcoming, ongoing projects
- Design pipeline, ppp cell, FAQ

Chapter - 2. Background Study

https://www.yourarticlelibrary.com/organization/importance-of-planning-its-features-limitations-process-and-types/8652

https://sid-israel.org/en/what-is-development/

https://careertrend.com/about-5095844-definition-development-planning.html

2.1 Planning and development

Development planning is the act of making plans related to socio-economic activities to meet certain objectives of a person or a household or an institution or the country. Planning is concerned with predetermined course of action. It provides the directions to the efforts of employees. Planning makes clear what employees have to do, how to do, etc. By stating in advance how work has to be done, planning provides direction for action.

2.2 Why should we use this software system?

The purpose of this software is to define the functionality and specifications of the design of a web application for Managing planning and development. The expected audiences of this software system are the developers and the admin of the web application. Now with the help of this system the admin has the information on his finger tips and can easily prepare a good record based on their requirements. Finally, we can say that this system will not only automate the process but save the valuable time of the manager or the admin, which can be well utilized buy his institute. This will be an additional advantage and management of power based on their free time from his normal duty.

2.3 User Experience

This software system is built keeping in mind that it is to be used by only one user that is the admin.

2.4.4 Benefits

- → Save time Manually it takes a lot of time while storing the lease information
- → Resources except this software system, the gathering of lease information will be difficult as there need a lot of man power resources in rural and urban areas.
 - → Reusable the system can be reused in the similar types of management.
- → It is cost effective as the user control the web application himself and does not go for professional service.
- → It saves time as it speeds up every aspect of the employee database management and payroll process with a range of automated features.
 - → Validating procedures and checks restrict user from making mistakes.
 - → The software is easy to use and is user friendly so no expertise is required.
 - → The calculations are automated so no chance of error.

2.4.5 Role of the Planning and development

Development Planning is the creation of measurable goals to support an employee's career. This includes defining how to achieve a goal and the time frame within which this should be done. Managers work with employees to document both their career goals and their personal goals.

2.4.6 Impact of the Planning and development

Development is about growth and helping to grow different aspects, as together they create further growth. Development is vital in today's society as it affects every aspect in everyday life. Certain factors have a huge influence on development or the lack thereof the need to improve development.

2.4.7 Report & Analysis

The software system has been developed to overcome the problems faced in the practicing of manual system. This software is built to eliminate and in some cases reduce the hardships faced by the existing system. Moreover this system is designed for particular need of the company to carry out its operations in a smooth and effective manner. This web application is reduced as much as possible to avoid errors while entering data. It also provides error message while entering invalid data. It is user-friendly as no formal knowledge is required to use the system.

2.5 Planning and development main modules

The following features are the main things of account and budget management system.

- 1. Dashboard
 - a) Feasibility Study
 - b) Ongoing Projects
 - c) Operations and maintenance
- 2. Feasibility Study
- 3. Ongoing Projects
- 4. Pipeline
- 5. Project Progress
- 6. O & M
- 7. PPP Cell
- 8. FAQ
- 9. Settings
 - a) FCP
 - b) Component data
 - c) Project data

Chapter – 3: Software Requirement Analysis

3.1 Introduction

A software requirement is a field within software engineering that deals with establishing the needs of stakeholders that are to be solved by software. The IEEE Standard Glossary of Software Engineering Terminology defines requirements.

3.2 Problem Analysis

The process of manually designing plan causes some problems in the management. Problems faced by several section today are:

- 1. A large number of company employees who constantly growing raises planning becomes longer and not effective.
- 2. The possibility of human error while designing the development planning
- 3. To search for data takes a long time because data is not stored properly.

3.3 Requirement

The Planning and development Management System Requirements provides high-level of functional requirements.

3.4 Software Requirement Specifications

- Documentation (user and administration)
- Operational behavior
- > Technical Support

3.4.1 SRS Scopes

The planning and development system is part of the management system. Activities carried out from the development planning system are processes of data from the BBA management control system.

3.4.2 Functional Requirements

Every section has a specific functionality that's are given below:

- Login Functionality
- Report download a copy of corresponding section
- FCP functionality

3.4.3 Non-functional Requirement

For an specific criteria, there should be applied non-functional requirements which are shortly described below:

Reliability

The operational interface can't fail within a period of time.

Availability

The system is available or not while a user wants access the information.

Security

All user can login to the system with secured procedure. Each user has a unique identification system. Admin can store user's login information.

Maintainability

All source code and related document should be controlled under a version of the system.

Portability

As the software run into several platform, the platform independence should be ensure. Different OS can access the software easily.

Usability

The Software should be easy to use and given a positive experience by the user's.

3.5 Interface Requirement

Computer system including software and hardware can turn the system on by interfacing them with human thought.

3.5.1 User Interface

- 1. Login Screen
- 2. Home Screen
- 3. FCP screen view
- 4. project pipeline
- 5. generating each functionality

3.5.2 Hardware Interface

- ◆ Server Configuration
- ◆ CPU/Processor
- ◆ Windows with apache preloaded
- ◆ Client Configuration

3.5.3 Software interface

- OS = Windows, Linux
- Language = PHP, JS
- DB = Oracle

3.5.4 Communication Interface

These interfaces include E-mail, Web Browser, Server Network and use http or ftp for security purposes.

3.6 SRS table

It describes necessary behavior of the software system and shows in the table

S.No.	Requirement Name	Requirement Classified
1.	Feasibility Study	
2.	Create	
3.	Manage	
4.	On going projects	
5.	Create	
6.	Manage	
7.	Pipeline	
8.	Create	
9.	Manage	
10.	Project Progress	
11.	Create	
12.	Manage	
13.	Photo Gallery	
14.	Operation & Maintenance	
15.	Create	
16.	Manage	
17.	PPP Cell	
18.	About PPP Cell	
19.	Upcoming PPP project	
20.	Ongoing PPP project	
21.	FAQ	
22.	Create	
23.	Settings	
24.	FCP	
25.	Component data	
26.	Project data	

3.6 Report Analysis

Independent to each other. At the end of the phase, the document of the requirement will be provided.

Priority Checklist

- Level-1: Must Be Performed
- ➤ Level-2: Must be perform for next level

➤ Level -3: Not Mandatory

SI.No.	Requirement Name	Functional/Non- functional	Priority
1.	Dashboard	Non-functional	3
2.	Feasibility Study	Non-functional	2
3.	Create	Functional	1
4.	Manage	Functional	1
5.	On going projects	Non-Functional	2
6.	Create	Functional	1
7.	Manage	Functional	1
8.	Pipeline	Functional	2
9.	Create	Functional	1
10.	Manage	Functional	1
11.	Project Progress	Non-Functional	2
12.	Create	Functional	1
13.	Manage	Functional	1
14.	Photo Gallery	Functional	1
15.	Operation & Maintenance	Non-Functional	2
16.	Create	Functional	1
17.	Manage	Functional	1
18.	PPP Cell	Non-Functional	2
19.	About PPP Cell	Functional	1
20.	Upcoming PPP project	Functional	1
21.	Ongoing PPP project	functional	1
22	FAQ	Non-Functional	2

30	Security	Non-functional	1
31	Maintainability	Non-functional	1
32	Portability	Non-functional	1

33	Usability	Non-functional	1
34	Database	Functional	1

Chapter – 4: System Design

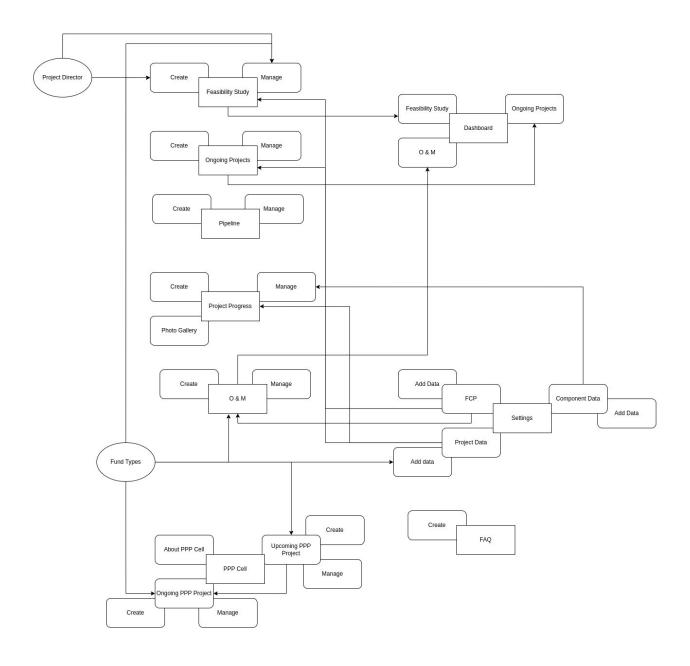

4.1 Algorithm Design

```
STEP - 1: START
                                                      if(X = 'PPP cell')
STEP – 2: CHECK Authentication
                                                           SELECT Y
STEP - 3: CALL Fun(X)
                                                          if(Y = 'About PPP cell')
STEP - 4: if(X = 'Feasibility Study')
                                                           SHOW pppCell
                                                          if(Y = 'Upcoming PPP project')
            SELECT Y
            if(Y = 'Create')
                                                              SELECT Z
             ADD feasibilityStudy
                                                              if(Y = 'Create')
            if(Y = 'Manage')
                                                                  ADD pppProject
             SHOW feasibilityStudy
                                                              if(Y = 'Manage')
        if(X = 'On Going Projects')
                                                                  SHOW pppProject
            SELECT Y
                                                          if(Y = 'On Going PPP project')
            if(Y = 'Create')
                                                              SELECT Z
                                                                if(Y = 'Create')
             ADD newConstruction
                                                                  ADD pppProject
            if(Y = 'Manage')
                                                               if(Y = 'Manage')
             SHOW constructionData
                                                                  SHOW pppProject
        if(X = 'Pipeline')
            SELECT Y
                                                     if(X = 'FAQ')
                                                          SELECT Y
            if(Y = 'Create')
                                                          if(Y = 'Create')

4.3 Data Flow Diagram

Chapter – 5: Testing Documentation

5.1 Introduction

The Test Plan is designed to prescribe the scope, approach, resources, and schedule of all testing activities of the transport Management System of BBA. The plan identify the items to be tested, the features to be tested, the types of testing to be performed, the personnel responsible for testing, the resources and schedule required to complete testing, and the risks associated with the plan.

5.2 Scopes

1. In scope:

Name	Applicable Roles	Description
Feasibility Study	Admin	Describe the feasibility of the project
On going projects	Admin	This section can describe the On going projects details
Pipeline	Admin	Additional project pipeline will be added
Project Progress	Admin	All progress report of project are described in this section
Operation & Maintenance	Admin	Operating any project or maintain another things related to the corresponding system describe the details information
PPP Cell	Admin	Partnership among the public or private create the whole things easier to understand
FAQ	Admin	Recent question by others is answered in this section
Settings	Admin	FCP and others relevant data is described here

2. Out scope

- User Interface (UI)
- Hardware
- System security and performance

5.3 Quality Objective

The test objectives are to verify the Functionality of the Planning and development management System. The project should focus on testing the planning and development to guarantee all these operation can work normally in real business environment.

5.4 Testing Methodology

5.4.1 Model

• **Waterfall model** – a dynamic approach where each step depends on the previous one, where the developers follow some sequence of steps progressively downwards forwards to achieve the goal. It is like a waterfall approach containing several phases.

5.4.2 Strategies

- Tester has access to the full view of code.
- It is known as transparent or glass box testing
- Avoiding errors and wasting time at an early stage
- White box testing contains various tests -
 - (a) Basic Path testing
 - (b) Loop testing
 - (c) Condition testing
 - (d) Memory perspective testing
 - (e) Performance testing

5.4.3 Levels

- Integration testing
- System testing
- Cross Browser Compatibility testing
- User Acceptance Test (UAT)
- API testing

5.4.4 Test Deliverables

- (a) Before Testing
 - Test plans document
 - Test case document
- (b) After Testing
 - Test Results/reports
 - Defect Report
 - Installation/ Test procedures guidelines

5.4.5 Tools

No.	Resources	Description
1.	Server	Oracle Database Server
2.	Network	LAN line.

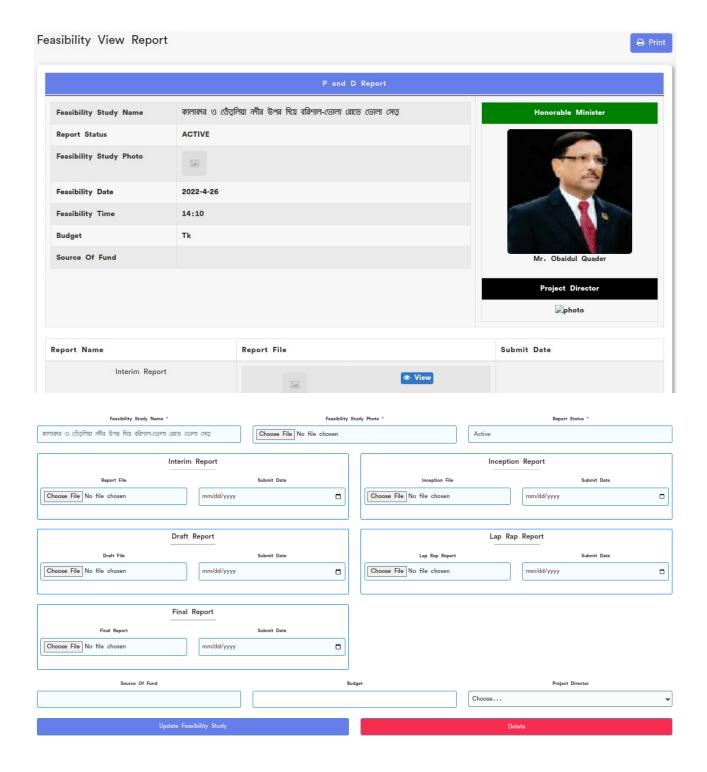

5.5 Test Cases with Result

Positive test case

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Add New Feasibility Study	1. Select feasibility study name 2. choose feasibility study photo 3. Select status 4. Choose interim report & submit date, inception report & submit date, draft report & submit date, Lap Rap report & submit date, Choose final report & Choose final report & Study Rap report	Data saved successfully	No error while selecting and entering data	P

	submit date		
	5. Choose source of fund		
	6. Enter budget & choose project director		
	7. click add feasibility study		

Negative Test Case

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Add New Feasibility Study	Data should be perfectly selected and must be valid in format	Perfectly executed the operation	No error while executing	Р

2. Manage

Positive test case

Case Title Description	Expected	Actual	Pass/
	Result	Result	Fail

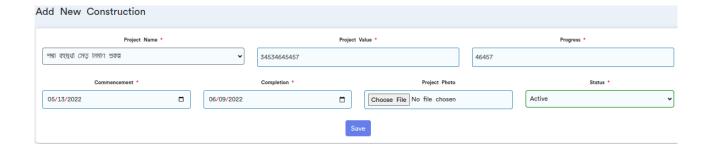

1	Feasibility Study Data	Display all Feasibility Study data	Displayed	All informati on are present	Р
2	View	Click to view specific feasibility study data	Displayed	All informati on are present	Р
3	Update	Click Update to update the existing information	Updated successfully	No error while updating	Р

Negative Test Case

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Feasibility Study Data	Data should be perfectly displayed	Perfectly executed	No error	Р
2	View	Information should be perfectly displayed	No information is missing while displaying	No error	Р
3	Update	Current information should be replaced by existing information or delete the current information	Updated or deleted successfully	No error	Р

Test Scenario 3: On going projects

1. Create

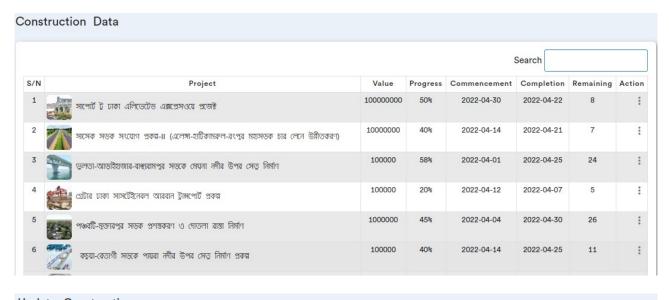

Positive test case

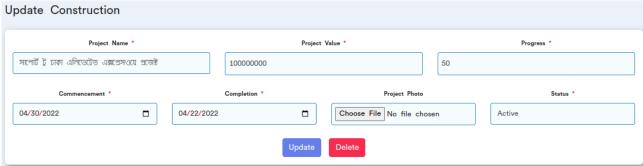

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Add New Construction	 Select project name Enter project value Enter progress Select commencement date & completion date choose project photo & status Click save 	Data saved successfully	No error while generating data	P

Negative Test Case

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Add New Construction	Data should be perfectly selected and must be valid in format	Perfectly executed the operation	No error while executing	Р

2. Manage

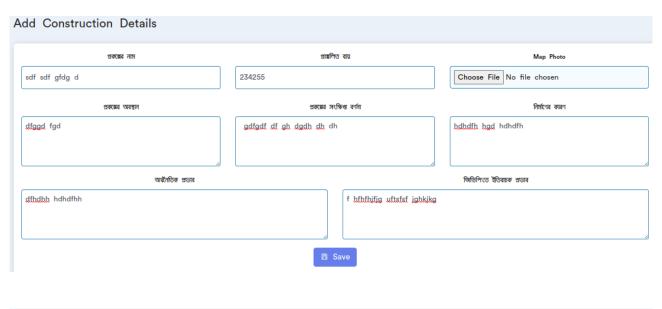

Document

Month

Positive test case

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Construction data	Display all Construction Study data	Displayed	All informatio n are present	Р
2	Edit	Click update to update existing data	Update the existing database	No error while updating	Р

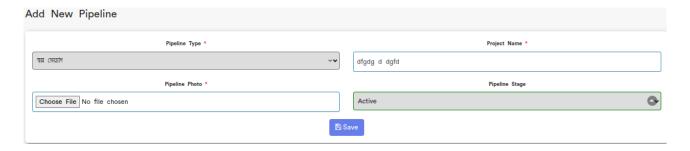

3	Monthly Report	View click view see monthly report	Displayed	All informatio n are present	Р
		2. Update click update to update monthly report	Update the existing information	no error	Р
4	Detail	1. View – to see details information 2. Add – to add details information 3. Update - to update details information	Operating successfully all the action	No error while executing	Р

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Construction data	Data should be perfectly displayed	Perfectly executed	No error	Р
2	Edit	Current information should be replaced by existing information	updated	No error	Р
3	Monthly Report	Data should be perfectly entered & updated	Executed perfectly	No error while updating or displaying	Р
4	Detail	Data should be perfectly entered & updated	Executed perfectly	No error while updating or	Р

		displaying	
		1 , 3	

Test Scenario 4: Pipeline

1. Create

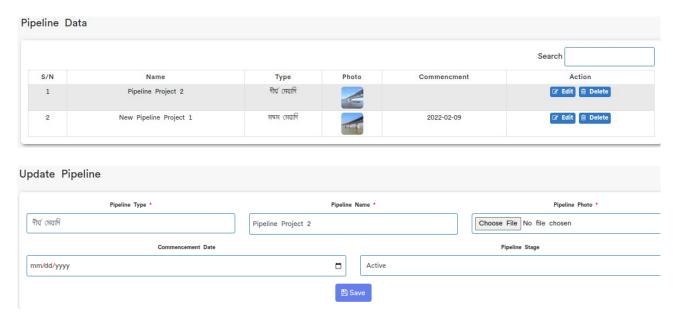

Positive test case

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Add New Pipeline	 Select pipeline type Enter project name Choose pipeline photo & stage Click save 	Data saved successfully	No error while generating data	Р

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Add New Pipeline	Data should be perfectly selected and must be valid in format	Perfectly executed the operation	No error while executing	Р

2. Manage

Positive test case

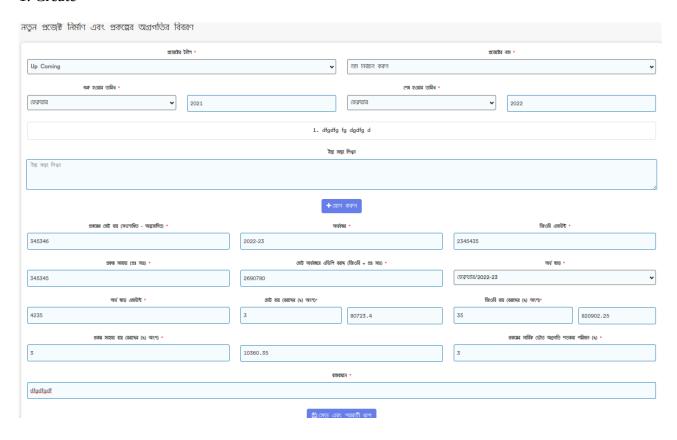

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Pipeline Data	Display all pipeline data	Displayed	All informati on are present	Р
2	Update	Click update to update existing data	Update the existing database	No error while updating	Р

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	Pipeline Data	Data should be perfectly displayed	Perfectly executed	No error	Р

2	Update & delete	Current information should be replaced by existing information or	Updated or deleted successfully	No error	Р
		delete the current information	successfully		

Test Scenario 4: Project Progress

1. Create

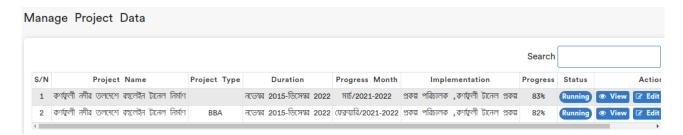

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	নতুন প্রজেক্ট নির্মাণ এবং প্রকল্পের অগ্রগতির বিবরণ	 Select project type, name, from date & to date, describe all issues Click add more to add another 	Data saved successfully	No error while data are saving	Р

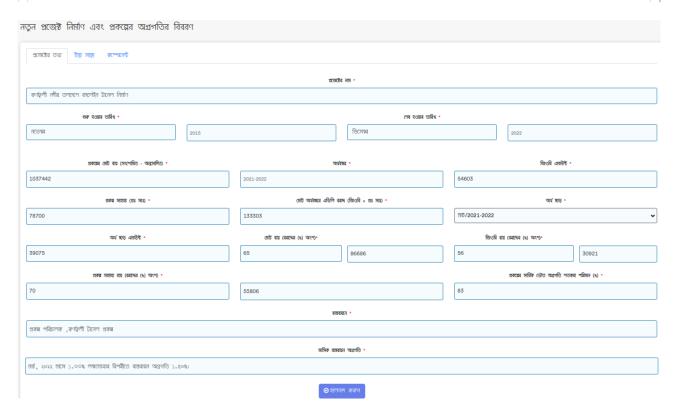

3. Enter total expense, finance year, GoB amount, project help		
4. select month of finance discount & enter amount of discount amount		
5. Enter total percentage of expense, GoB & project help from allocated money		
6. Enter percentage of overall physical progress of the project & describe of the implementation of the project		

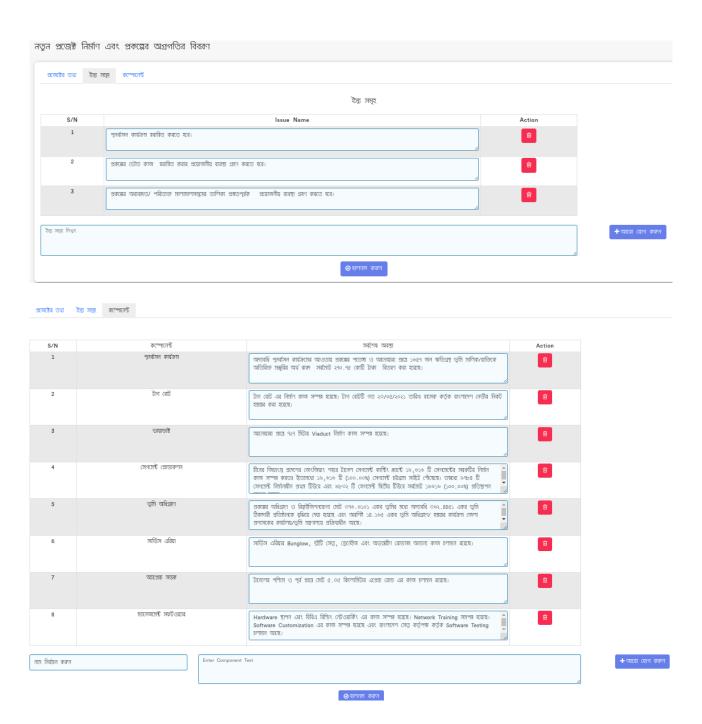

Case ID	Title	Description	Expected Result	Actual Result	Pass/ Fail
1	নতুন প্রজেক্ট নির্মাণ এবং প্রকল্পের অগ্রগতির বিবরণ	Data should perfectly selected and entered	Perfectly executed the operation	No error while executing	Р

2. Manage
